Application/Control Number: 09/821,651

Art Unit: 2152

DETAILED ACTION

- This action is in response to Applicant's RCE. Claims 1, 4-6, 9-11, 14-16 and 19-21 are presented for further examination.
- 2> This is a non-final rejection.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8.15.2005 has been entered.

Response to Arguments

- Applicant's arguments with respect to claims 1, 4-6, 9-11, 14-16 and 19-21 have been considered but are most in view of the new ground(s) of rejection.
- 5> Applicant also asserted that the prior art references do not disclose a receiving means for receiving an automatic upload program.

As detailed in the previous action [Final Rejection, 5.27.2005], Prust substantially disclosed the limitations of claim 1 but did not disclose receiving an automatic upload program. Burson was relied upon to teach downloading of an automatic upload program,

Application/Control Number: 09/821,651

Art Unit: 2152

such as a Java applet, that automated connections to an access point in a server [see for example, column 3 «lines 15-18» | column 15 «lines 1-45»]. Since Burson discloses the client computer downloading or receiving the program, there is, by implication, some sort of means by which the program is received. Morever, Burson discloses that a client software receives and executes the downloaded program.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6> Claims 1, 5-6, 10-11, 15-16 and 20 are rejected under 35 U.S.C § 103(a) as being unpatentable over Prust, U.S Patent No. 6.714.968 in view of Burson et al, U.S Patent No. 6.405.245 ["Burson"], in further view of Cohen, U.S Patent No. 6.356.941.
- As to claim 1, Prust discloses an information processing device, comprising:

 transmitting means for transmitting user registration data necessary to secure a user's exclusive storage area in a server connected in a network, to said server over a network

 [abstract | Figure 8 «items 805, 807» | column 7 «line 59» to column 8 «line 7»];

receiving means for receiving address data designated as an access point indicating said exclusive storage area oriented to said user registration data from said server over said

Application/Control Number: 09/821,651

Art Unit: 2152

network [column 5 «lines 29-38» | column 6 «lines 23-36 and 59-62» where: Prust discloses using a web browser to access the storage area. Therefore it is implicit that an address is transmitted from which the user can access the area]; and

wherein each of said automatic upload programs is programmed to connect to a unique part of said exclusive storage area [Figure 5 | column 6 «lines 28-35» where : Prust';

connection means for performing connection processing automatically to said access point in the said server based on said address data received by said receiving means [column 6 «lines 23-36» where: Prust discloses automatically connecting to the remote directory using a script].

transfer means for writing a data file to the exclusive storage area automatically when connection processing is performed [Figure 5 where: the script automatically writes information the specified storage area when connected to the storage area].

Prust discloses utilizing scripts (upload programs) to connect to remote storage but does not disclose receiving the one or more automatic upload programs nor does he disclose transferring a control file used for controlling access by another user.

8> In the same field of invention, Burson discloses a system for accessing personal data.

One of the methods that Burson achieves this functionality is by having the client download an application to the client; the application is then responsible for automated data communications between the client and the server [Figure 2 | column 3 «lines 15-29» | column 15 «lines 1-45» where : the receiving means is implied and inherent in Burson's client computer and software. The computer is connected to the Internet and downloads the

necessary automatic upload program; therefore, the client must be equipped with a receiving means that downloads the program]. It would have been obvious to one of ordinary skill in the art to incorporate Burson's downloading functionality into Prust's system, modifying Prust's scripts so they are downloaded from the server as taught by Burson. One would have been particularly motivated to perform such an implementation to enable Prust's scripts to be platform independent (JAVA applet, as is well known in the art) and would further enhance Prust's stated objective of providing a variety of remote access possibilities to the storage site. It is further advantageous to provide automated actions for logging on and accessing access points within a remote storage server as is taught in Burson.

In the same field of invention, Cohen is directed towards establishing personal network vaults for users that enable secure remote storage of files. A distinguishing function proposed in Cohen is that users have control over who can access their personal vault [column 7 «lines 60-65» | column 11 «lines 26-29»]. This is achieved in part through the use of an authorization list, that permits only authorized users access to a particular file within the vault. Therefore, Cohen teaches transferring a control file used for controlling access by another user to the data file [column 4 «lines 55-59» | column 9 «lines 2-7 and 20-22» | column 15 «line 61» to column 16 «line 3» | column 16 «lines 15-20» where: Cohen discloses a client-side user interface that enables the user to perform administrative actions, such as using the access list for controlling who as access to his vault and transferring files to the server]. It would have been obvious to one of ordinary skill in the art to incorporate Cohen's authorization list functionality into Prust's remote user storage system for the obvious

advantages of enabling security features and allowing a user to control which other users have access to their files.

- As to claim 5, Prust discloses an information processing device of claim 1 wherein said address data is a uniform resource locator (URL) for designating resources on said network [column 5 «lines 29-38» | column 6 «lines 23-36 and 59-62» | column 7 «lines 26-30»].
- As to claims 6, 11 and 16, as they are merely methods or mediums that perform the same steps of the device of claim 1, they are rejected for the same reasons set forth for claim 1, supra.
- As to claims 7, 12 and 17, as they are merely methods or mediums that perform the same steps of the device of claim 2, they are rejected for the same reasons set forth for claim 2, supra.
- As to claims 10, 15 and 20, as they are merely methods or mediums that perform the same steps of the device of claim 5, they are rejected for the same reasons set forth for claim 5, supra.
- Claims 4, 9, 14, and 19 are rejected under 35 U.S.C 103(a) as being anticipated by Prust and Burson, in further view of Hayes, Jr. et al ("Hayes"), U.S Patent No. 6,339,826.

Art Unit: 2152

- 15> Hayes was cited by Examiner in non-final Office Action, dated 7.8.2004.
- As to claim 4, Prust and Burson disclose the information processing device wherein said connection means is to perform connection processing to said access point in said server in response to a click operation on an exclusive icon which is displayed on a given display unit [see Prust, column 5 «lines 29-38 and 45-59»] but do not explicitly disclose that the icon drives an automatic upload program.
- Hayes teaches an icon that drives an automatic connection setting program [Figure 7, items 710 712, 714, and 716 | column 14 «lines 7-26 and 50-65]. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include Hayes' icon functionality into Prust and Burson increase the security of the device by associating specific icons (and their related applications) to users, which would consequently allow users to access only those applications on the server which they are authorized. Additionally, the use of icons with applet programs such as those seen in Burson and Hayes is well known in the art.
- Claim 9 is a method that claims the steps carried out by the information processing device of claim 4. Therefore, claim 9 is rejected for the same reasons as set forth for claim 4, supra.

Art Unit: 2152

Claim 14 is a storage medium that claims the steps performed by the information processing device of claim 4. Therefore, claim 14 is rejected for the same reasons as set forth for claim 4, supra.

Claim 19 is a network system consisting of a server and information processing device connected to said server that performs the steps of the information processing device of claim

4. Therefore, claim 19 is rejected for the same reasons as set forth for claim 4, supra.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dohm Chankong whose telephone number is (571)272-3942.

The examiner can normally be reached on 8:30AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess can be reached on (571)272-3949. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
